

Global Secure Cloud

Easily connect worldwide with nearly 500 Cloud applications and digital ecosystems with one connection. Minimize risk by creating secure, direct private connections that bypass the public internet and improve performance. Control and determine how and where connections take place with flexible bandwidth options, without being tied to or investing in decentralized infrastructure for connecting Cloud.

Simplify your Cloud architecture

It can be challenging for IT to manage different cloud solutions. Simplify your IT by directly connecting, integrating and optimizing your traffic to multiple Clouds and IT services. Experience enhanced security and app performance by extending your private distributed network, bypassing the internet. As a carrier-neutral Cloud connectivity provider, we can help you avoid the vendor lock-in, keeping your flexibility – since we understand there is not a ‘one size fits all’ solution, while helping you keep your agility to spread risks. We connect you directly to your Clouds, seamlessly integrated into your network design.

Strategic collaboration Equinix®

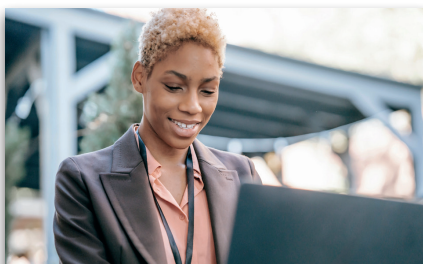

We have partnered with the Global Neutral platform of Equinix®. This is the world’s largest ecosystem of interconnecting which enables our customers to interconnect with 2,900+ Cloud and IT Services representing 50% of the Fortune 500 and 36% of the Forbes Global 2000. Together with Equinix® we have set up a multi-redundant, active interconnection infrastructure, which we integrate and manage for our customers.

Benefits Global Secure Cloud

✓ Secure & reliable

Connect directly to your ecosystems for improved app performance and a reliable and consistent end-user experience on all platforms.

✓ Scalable & flexible

Decide how and where connections are created with flexible broadband options. Implement, connect, and scale IT & Cloud applications systems and resources quickly.

✓ Easy management

Determine which locations are connected worldwide and who has access to which location within the connected sites. Ethernet is easy to manage and integrate into the current network.

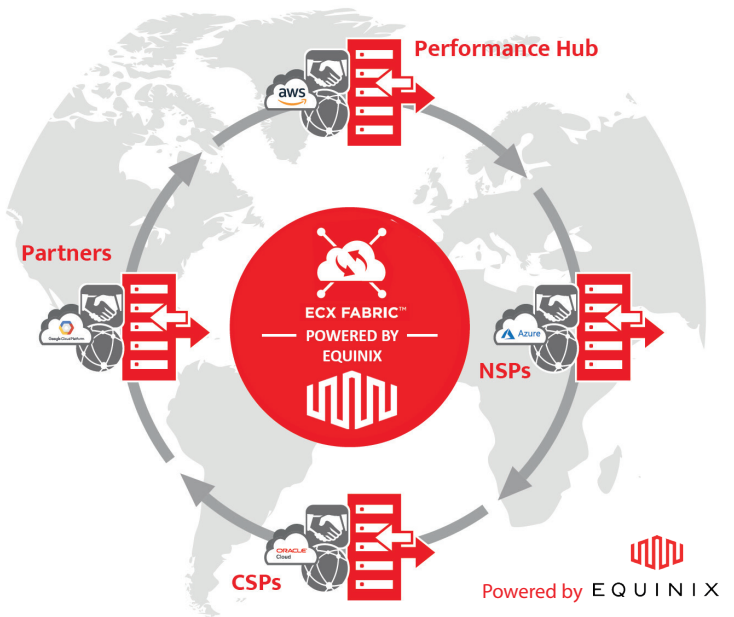

**TOMORROW'S
COMMUNICATION,
FOR YOU, TODAY**

How does it work?

Global Secure Cloud directly, securely, and dynamically connects distributed infrastructure and digital ecosystems on the platform via global, software-defined interconnection. Available across 30+ Global locations, Global Secure Cloud is designed for scalability and agility. Through a single port, you can discover and reach anyone on demand, locally or across metros, to drive your digital future-forward.

Dedicated Cloud Access

We connect all your global Clouds with a single end-to-end orchestration with 1 invoice, 1 contract, 1 SLA, and 1 contact - with the delivery of a single connection to multiple Clouds! We help you pick the preferred routes and geographical spread to interconnect to the cloud, improving latency, performance, or filling in local legislation needs. We can combine this solution with a single connection from our Global Connectivity portfolio or integrate this in a Global SD-WAN Connectivity design, which can be fully redundant designed and/or managed.

Global Cloud Security

Transform your security for the modern cloud era with the Global Cloud Security portfolio. Protect users and offices by a direct-to-cloud security stack, while breaking free from costly appliances and network infrastructures. Utilize a solution designed from the start for work-from-anywhere and use the secure internet and web gateways offered by the largest security clouds.

Cloud-Delivered SD-WAN Ecosystem

Our tailored neutral design takes into consideration your existing and future security and cloud solutions. With our Managed Secure SD-WAN solutions we can provide fast and secure Cloud access integrated with your network design for your cloud-first strategy or Managed Ramp-up to the Cloud.

With the ability to segregate voice, video, data and compliance traffic, and enhancing audio and video performance with the market leaders for SD-WAN. Easily integrate your SD-WAN solution by connecting it to the Global Cloud gateways and have direct access to Cloud infrastructure providers like Google, Amazon and Azure from your SD-WAN environment.

Minimize security threats

Connect privately to your digital ecosystems, bypassing the public internet.

Quick delivery

Depending on the location, the solution is activated within 1 hour.

Cost optimization

Combine a carrier-neutral design to integrate multiple Clouds without the investment in decentralized infrastructure and management in data centers.

Worldwide availability

Connect in more than 30 global markets with more than 500 Clouds worldwide.

communication,
for you, today.

Our Professional Services

Project Management

Our project managers are closely involved in the process; from the design to the development of the solutions, including the transfer to the management organization.

Design & Engineering

Together with the (solution) architects, engineers and consultants, our engineering professionals create a design that exactly meets the requirements of all solutions, locations and users.

Customer Mission Control Portal

Gain insight in all invoicing and solutions worldwide (including statuses) in one portal. The portal is designed to fit your organization's structure and hierarchy and gives employees access to specific data and efficient, user-friendly overviews.

24x7 Support & Monitoring

Our Global Mission Control Centre (NOC) proactively manages all our customers' global solutions (NEN-ISO/IEC 27001:2013). Our experienced and service-oriented solution providers like to go the extra mile and even solve problems that are not our responsibility.

Service Management

Our service managers proactively monitor our solutions and ensure optimal performance for the best experience for your employees by quickly responding to trends and changes.

Global Logistics Services

A single point of contact for shipping and logistic operations relating to hardware components worldwide, incl. support with customs clearance, import duties, installation and other support processes.

Global Certified On-site Engineers

Use our engineers as your own employees and deploy them globally for quick migrations and technical support at (possibly remote) locations without having to use local technical staff or your own employees.

We are Horizon

Horizon delivers communications, infrastructure, and security solutions worldwide with 24x7 proactive support and local management. With our independent experts, we work with the world's best technology partners to connect the needs and aspirations of our customers with flexible and reliable solutions that leverage proven innovations accredited by Gartner®.

Our added values

- ✓ Independent & Carrier-Neutral
- ✓ 1 Tailored invoice, 1 Contract, 1 Contact, 1 SLA
- ✓ Global Mission Control Center - 24x7 NOC
- ✓ Professional Services
- ✓ Flexible & Scalable tailor-made solutions
- ✓ 'Best-of-breed' technology
- ✓ Cost-efficient
