

Indiana

Characteristics

Please be aware of the specific characteristics of Indiana leather.

- Description:** Indiana is a nubuck leather with a natural wax finish. It's developed to create an extra vintage effect during use.
- Attention:** We cannot guarantee consistent color and grain pattern in the hides, between the hides and between the lots. The pure natural character of this leather was achieved by the minimal coverage with wax and colorants, making all the features of this "living" product visible. Compared to covered leathers, colorfastness to light and rubbing shows lower values. The special "vintage effect" will increase during use. Sound advice prior to sales is a must.
- Maintenance:** Advice on maintenance for our articles is given by LCK-Nederland.
